## NEW

### What is Gator® SpeedLoad™ ?

It's a new and Oregon exclusive brushcutter cutting system. The system is composed of a head together with a disc shaped line. It is designed to facilitate and speed up the loading of trimmer line.

### Why?

Brushcutters, trimmer lines and trimmer heads:

#### *Sources of frustrations ?*

A survey made in May 2015 with 300 professionals and 300 homeowners has indicated that more than 70% of brushcutters users are confronted with problems when dealing with brushcutters accessories!

### **GATOR® SPEEDLOAD™** **YOUR SOLUTION FOR** **THE TOP 3 COMPLAINTS:**

- It's difficult to load line.
- The head is not durable, it breaks or wears too quickly.
- It's complicated to find the right head that will fit a machine.

**FAST  
EASY  
DURABLE**

*« Trimming has never been so easy.  
I can load this revolutionary nylon  
line disc in less than 20 seconds. »*

## FAQ : Gator® SpeedLoad™

### What is Gator® SpeedLoad™?

Gator® SpeedLoad™ is a new Oregon brushcutter cutting system: it is composed of a head and a disc shaped line.

### Who is Gator® SpeedLoad™ for?

GSL is for everybody, whether you are professionally trimming every day or working at home from time to time. The three heads were designed to fit most petrol brushcutters: 24-225 & 24-275 will fit machines >25cc while 24-550 is meant for >33cc.

### What sizes are available?

There are two head diameters: 108mm and 130mm. There are two 108mm versions: The 24-225 & 24-275. 130mm version is 24-550.

Discs come in 3 different sizes: small heads (24-225 & 24-275) can fit 2,0mm and 2,4mm discs while the large head (24-550) can fit 2,4mm and 3,0mm discs.

### Which head will fit my machine?

We've developed a list of brands & models on which Gator® SpeedLoad™ fits. You will find it on our website: [OregonProducts.com/GSL](http://OregonProducts.com/GSL)

### How long are the discs?

The 2,0mm version of the small disc is 4,32m  
The 2,4mm version of the small disc is 3,86m  
The 2,4mm version of the large disc is 7m  
The 3,0mm version of the large disc is 5,52m

### What packaging do you have?

The two small heads (24-225 & 24-275) come in a clamshell. The big head (24-550) will be presented in a cardboard box. Each head packaging is composed of a Gator® Speedload™ head, 1 pre-mounted disc & 1 set of washer rings and/or adapters. Each Gator® SpeedLoad™ line width (2,0mm, 2,4mm & 3,0mm) come in pack of 3, 10 or 25 discs.

### Can standard line fit the Gator® SpeedLoad™ head?

No, only Gator® SpeedLoad™ line will fit in the Gator® SpeedLoad™ head.

### Can Gator® SpeedLoad™ line fit non Gator® SpeedLoad™ heads?

In theory, you could unwind Gator® SpeedLoad™ discs and feed it in a standard head. That is not what Oregon recommends though.

If you want to use disc shaped line in a standard head, we recommend you to use Spyro™.

### Where is it made?

The heads were designed in Italy and made in China. The discs are made in France.

### Is it really universal?

With the number of brushcutters brands and models in the market, it is a challenge to guarantee the Gator® SpeedLoad™ fits 100% of them.

We are confident it should fit more than 95% of machines, including all major brands.

### What way should I put the disc?

You can put the disc either way, it will still work. There is, however, a best way depending on the rotation of your machine. The metal plate on which you place the disc shows through icons how to adapt the disc in function of the rotation of your machine.

### What adaptors do I need?

24-225 includes all adaptors you need to fix it to your extended spindle brushcutter.

24-275 & 24-550 only includes washers (rings) to adapt the head shaft to the right thickness of the machine thread.

You will need the original nut/screw sold with your brushcutter to fix the head.

### What applications?

Gator® SpeedLoad™ has been developed to outperform in the heaviest low grass, high grass & weeds environments. Fencing, soft edging, hard edging are perfect conditions to experience the outstanding performance of Gator® SpeedLoad™.

### Which replacement parts are available?

Lower head cover (including eyelets and knob) - part numbers:

- 24-101 for 24-225 and 24-275
- 24-103 for 24-550

Knob - part numbers:

- 24-102 for 24-225 and 24-275
- 24-104 for 24-550

### I changed the line disc and the Tap & Go mechanism is blocked – What can be the reason?

Open the head and check if the line is not stuck between the disc and the base plate of the cover.

Remove the line and make sure it runs free through the eyelets.

### The Head is fixed to the machine but it is not stable?

Check if the right washer/adaptor was used to adapt the head shaft perfectly to the width of the machine thread.

### It is difficult to open the large head – is that normal?

To make the large head as resistant as possible, the side taps are stiff à open 1 side tap at the time and the large head is very easy to open.
